ZUSAMMENFASSUNG

Senior Full-Stack Developer with 8+ years of experience building scalable web applications in aviation and AI-driven systems. Strong expertise in Vue 3 (Composition API), Node.js, and Firebase-based architectures. Experience leading small engineering teams (2-5 developers), designing frontend architecture, and implementing production-ready backend systems. Currently focused on AI-powered applications, LLM integration, and scalable conversational interfaces. Open to Senior Full-Stack or Frontend roles in Germany.

BERUFS ERFAHRUNG

Full-Stack Developer (Vue / Node.js / JavaScript / AI Integration) 11/2024 - Heute

lingvochat.com

Designed and developed an AI-powered language learning platform focused on contextual audio training and adaptive learning flows.

Responsibilities & Achievements:

- Designed full-stack architecture (Vue 3, Node.js, Firebase)
- Built scalable audio management system using Cloud Storage
- Implemented SRS-based vocabulary training logic
- Developed modular, scalable UI for handling large audio libraries
- Designed AI-agent architecture with role-based interaction modes
- Implemented cost-efficient LLM integration strategies
- Built unified AI chat interface integrating grammar, vocabulary, and dialogue simulation
- Defined product strategy and technical roadmap

Lead employee of the Development

11/2021 - 06/2025

LogicEditor JSC «ORS»

Company delivering advanced IT solutions for aviation and travel industry (airlines, airports, travel agents).

Responsibilities:

- Led a team of 2-5 frontend developers
- Coordinated development tasks with stakeholders
- Performed technical estimations and sprint planning
- Conducted code reviews and ensured code quality
- Managed release preparation and deployment cycles
- Organized weekly technical sync meetings

Technical Focus:

- Development of web-based aviation systems
- Frontend architecture optimization
- Performance and build process improvements
- Close collaboration with backend teams and analysts

- SQL, NoSQL

- JavaScript
- Node.js

Frontend Developer

03/2017 - 11/2021

LogicEditor JSC «ORS»

Development of client-side applications for aviation systems, including airport self check-in terminals.

Key Contributions:

Implemented business logic for complex aviation workflows

Optimized frontend performance and build processes

Collaborated with analysts to translate business requirements into technical solutions

Worked closely with backend developers to integrate APIs

JavaScript / Lua Developer

10/2016 - 02/2017

LogicEditor

Developed scripts for CAD systems

Implemented automation logic for internal tools

1C developer

07/2010 - 09/2016

Targetika

Developed business applications using 1C:Enterprise platform

Implemented accounting and operational automation solutions

1C Developer

03/2002 - 03/2010

Individual Businessman

Developed business applications using 1C:Enterprise platform
Implemented accounting and operational automation solutions

BILDUNGSWEG

**Yaroslavl State Technical University (YSTU)
Russland**
